
Figures 1 to 4.

Figure 1: RBV changes caused by eating during 2-needle dialysis (CritLine). Provided by Franta Lopot

Figure 2: RBV change caused by eating during single-needle dialysis (CritLine). Provided by Franta Lopot
Figure 3: RBV changes due to eating and sitting during a 7 hour dialysis session. Reproduced from reference 3.

Figure 4: Hemocontrol screen. In the first part of the treatment the ‘dot’ indicates that the patient was not achieving the desired weight loss and the RBV was too low. The weight loss target was reduced.
