Vascular Surveillance Program: 18 months results!

Catarina Santos Cunha, Fresenius Medical Care, NephroCare Fafe, Portugal

48th EDTNA/ERCA International Conference | Prague | 16 September 2019

Presentation outline

1 Introduction

2 Objectives

3 Methods

4 Results

5 Conclusion

Introduction

- The Vascular Surveillance Program is an important factor in the prevention or worsening of complications in patients with chronic kidney disease, since it contributes to the way of caring and educating, motivating the patients to participate actively in the treatment and to perform the self-care, reinforcing the treatment adherence.

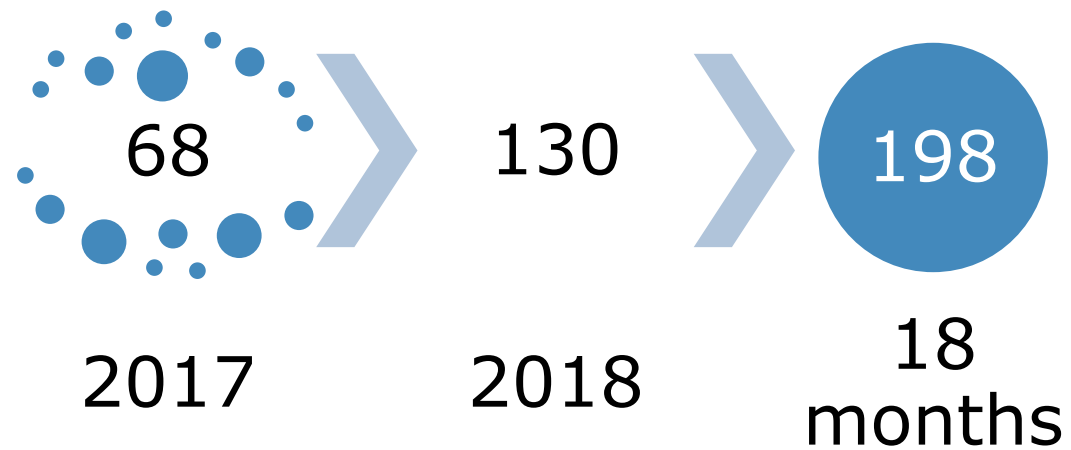

Objectives

To describe the prevalence of neuropathic and vascular disorders in *type 2 Diabetes Mellitus* (DM2) patients versus those without DM2.

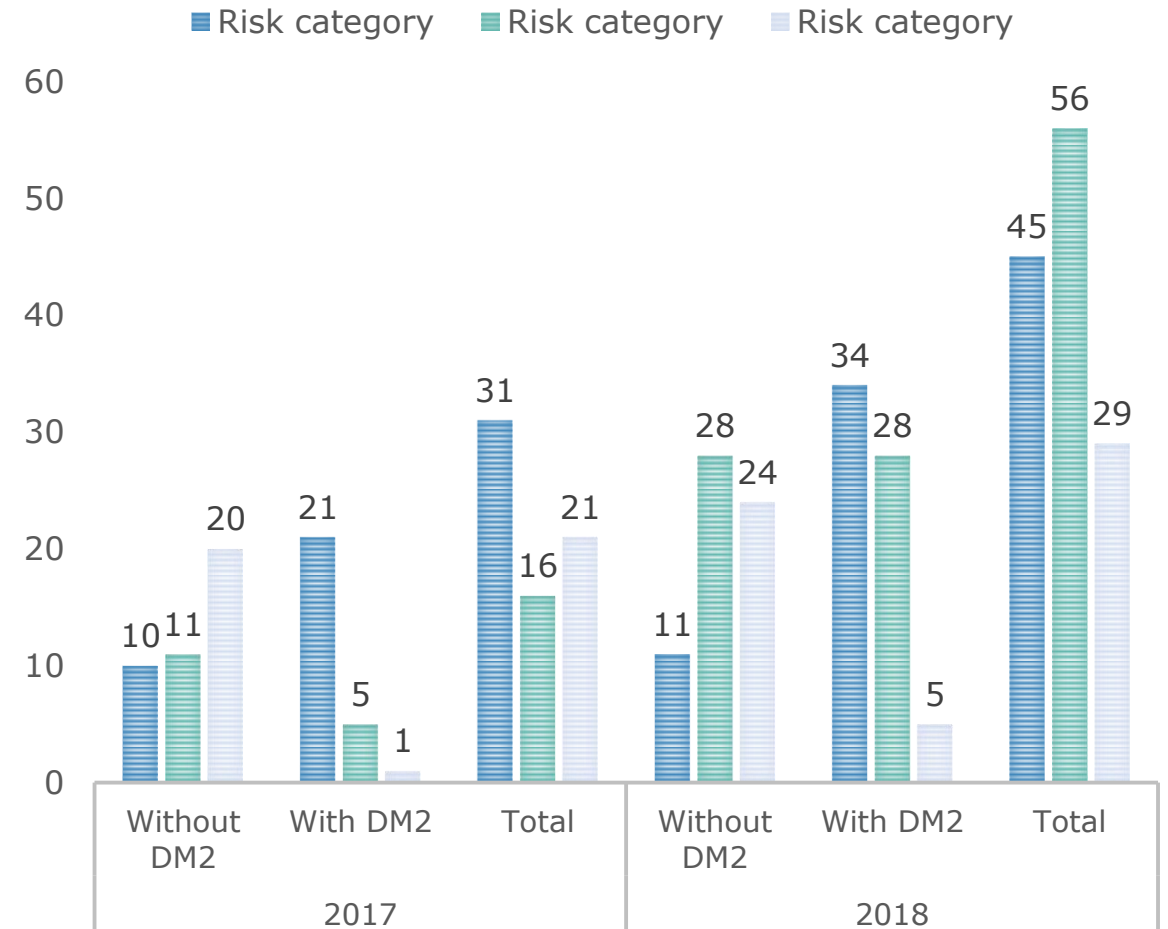

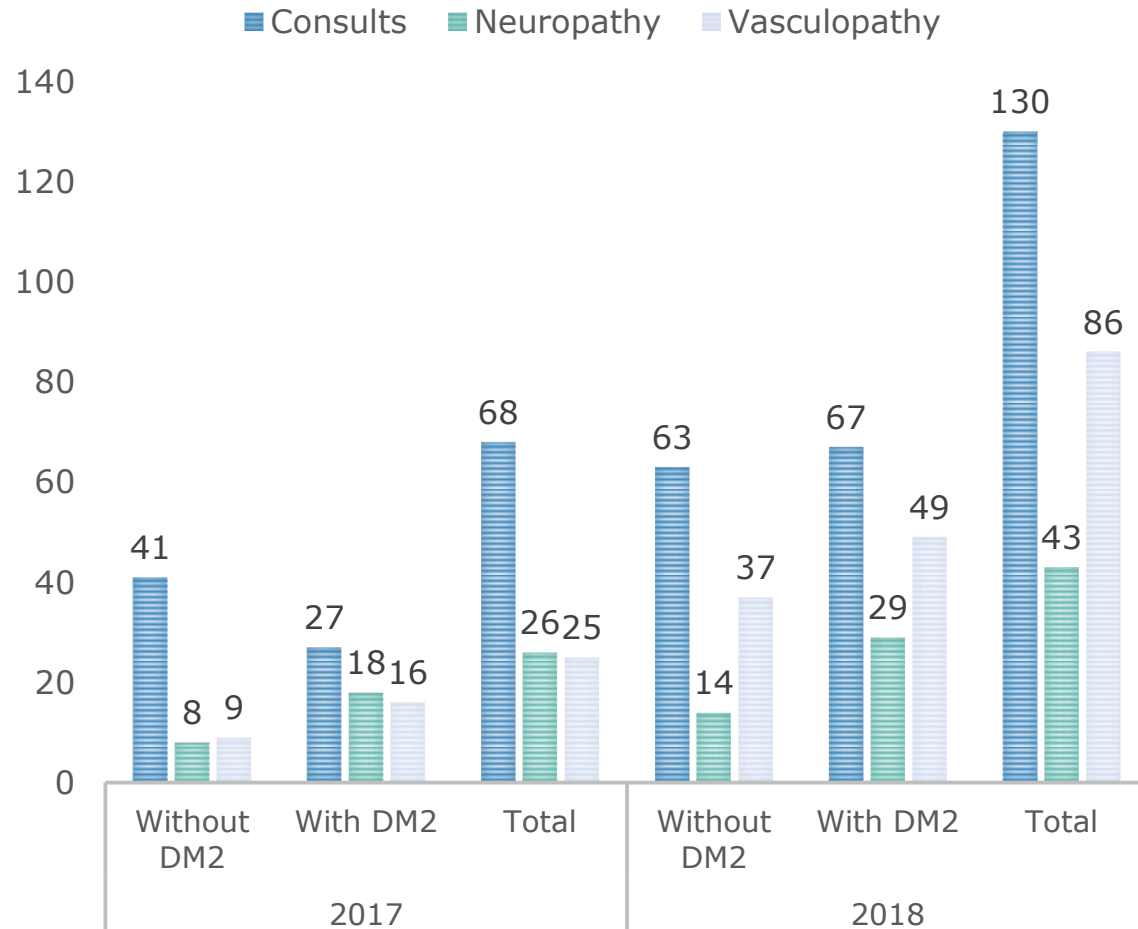

Consultations

Results

		2017			2018		
		Without DM2	With DM2	Total	Without DM2	With DM2	Total
Consultations		41	27	68	63	67	130
Neuropathy		8	18	26	14	29	43
Vasculopathy		9	16	25	37	49	86
Risk category	High	10	21	31	11	34	45
	Medium	11	5	16	28	28	56
	Low	20	1	21	24	5	29

Results

Conclusion

- **Health professionals play a fundamental role in the transmission of information, maintaining an attitude of listening and respect for the needs of people, valuing their knowledge, always being attentive to differences, which, after all, represent the plurality of this population.**

**Thank You Very Much
for Your Attention!**
