The Home Haemodialysis Guide – One year of Experience

Presented by
Siobhan Gladding & Michel Roden
A Joint Project between EDTNA/ERCA and NxStage Medical
SIOBHAN GLADDING

Siobhan has been a nurse for nearly 30 years working in renal, critical care and paediatrics. Before her role with NxStage she was the matron at Queen Alexandra Hospital in Portsmouth.

Siobhan has been working with NxStage since 2011 and she is passionate about home haemodialysis and offering life changing benefits to the patients and their families.

Siobhan is today the Director of Clinical Education.
ONE YEAR OF EXPERIENCE...
TIMELINE

- **PHASE 1**
  - Start up of the Collaboration
  - Development of the Content & Design of the Book & Application

- **PHASE 2**
  - First Workshop with the Project Team
  - Launch at the 46 EDTNA/ERCA Int’l Conference, Krakow

- **PHASE 3**
  - Launch at the 47 EDTNA/ERCA Int’l Conference, Genoa

---

47th EDTNA/ERCA International Conference September 15th – 18th, 2018, Genoa, Italy

A Guide to Implementing Best Practice in Home Haemodialysis

Healthcare Professionals

Patients
MICHEL RODEN

- 1982 started to work as a nurse
- 33 years working with dialysis - HD; PD; HHD education
- 23 years as Nephrology nurse
- 2018 - DOPPS CRA for Belgium
OBJECTIVES

- The benefits of this modality of renal replacement therapy are clearly demonstrated in the literature and the ability to perform Frequent Home Haemodialysis is clearly a key contributing factor to positive outcomes.

THE AIM

- Of this Project is to reach all renal healthcare professionals caring for Chronic Kidney Disease patients, offering them the chance to learn from experts about caring for patients who choose HHD treatment, focusing on FHHD.

- For Patients who take responsibility for their dialysis treatments are empowered and this can improve the quality of their life.
NO BARRIERS...
ONLY OPPORTUNITIES
DR. ROSEMARIE BAILLOD STORY...

Dr. Rosemarie Baillod, who worked alongside Dr. Shaldon in the 60’s, explained how the machines were developed:

“I had to develop alarm systems and I had to go to a shop called Radio Spares, and I had to buy relays, light bulbs and little alarms. We got some monitoring from Cambridge Monitors – if the pressure went too high it would alarm, if it went too low it would alarm, and it was in a box about 2 feet square, it looked very smart. The first time we arrived at the patient’s home – everything leaked!”
